

Discuss with O+G and NICU

Timing / trimester / steroid cover (24-34 weeks)
Pre/post CTG or FHR monitoring
GA / LA / regional anaesthesia

Caution with drugs

- NSAIDS

Consider risk-benefit and trimester

NB. Midazolam, ondansetron, N₂O
in clinical doses are acceptable

Reversal strategies

- Use neuromuscular monitoring
- Neostigmine with atropine / glycopyrrolate
- Do NOT use sugammadex
